

Balendra kumar Paraste

Software Engineer

Summary

Software engineer with **4.5 years of experience**, having **moderate exposure to Planning Space and AI-powered orchestration applications**, with strong frontend and **QA automation experience**.

Balendra has a strong ability to understand customer requirements and develop **user-interactive, scalable web applications**. He is highly skilled in **React.js, JavaScript, TypeScript, HTML, CSS, Bootstrap, and Material UI**, and also has solid experience with **backend technologies such as Node.js, Express.js, and NestJS**. He demonstrates strong expertise in **Micro-Frontend architecture, reusable component design, and performance optimization**. Balendra consistently delivers **high-quality, well-tested code**, contributing to **unit testing and code reviews**.

Significant Projects

Project 1: (Blueyonder) BlueYonder Orchestration Ai powered Application

Worked on a **BYO AI-powered Micro-Frontend (MFE)** application that presents a list of AI agents designed to perform Blue Yonder-specific data and planning tasks. Gained hands-on experience in handling and understanding streaming AI responses (real-time data updates) within the UI. Contributed to feature development using **React and TypeScript**, **leveraging a custom internal UI library built on Material UI**. Supported the implementation with **unit testing, end-to-end automation testing, and delivered features following Agile/Scrum practices**.

Project 2: (Blueyonder) Planning space and Process Orchestration

Gained a strong understanding of the **enterprise Micro-Frontend (MFE) architecture** used across the platform, including how individual MFEs are developed, integrated, and deployed independently.

Worked closely with multiple MFE teams to understand cross-MFE interactions, shared dependencies, and communication patterns. Developed a solid understanding of the UI layer built with **React and TypeScript**, along with a custom internal UI library built on **Material UI**, focusing on consistency and reusability of components. Also gained exposure to **unit testing, end-to-end automation testing, and Agile/Scrum delivery practices** within a large, distributed engineering environment

Roles and Responsibilities:

- Contributed to UI feature development using **React and TypeScript**, working on specific enhancements such as Scenario Filters within a large enterprise application.
- Leveraged a shared internal **UI library built on Material UI** to ensure consistent and scalable user interfaces.
- Implemented feature-level logic including state management, filtering behavior, and conditional rendering.
- Wrote and maintained unit tests using **Jest and React Testing Library (RTL)** to ensure reliability and prevent regressions.
- Contributed to **end-to-end automation testing using WebdriverIO while working in an Agile/Scrum environment**.

Project 3: Yuyiii.com

About The Project

It is a travel and tour listing based web application that uses **PHP CSS frameworks (Bootstrap) Angular**. Where users can check out the famous destination or places by selecting a specific city and can book the tour which includes rooms or foods .

Roles and Responsibilities

- Thoroughly analyzing the requirements for effective development initiation.
- Work with **CSS preprocessors (Sass) or CSS frameworks/libraries** to create modular and scalable stylesheets.
- Collaborated closely with clients to understand their specific requirements, ensuring seamless customizations to meet their needs.
- Implement the visual designs provided by the **UI/UX designer using HTML, CSS, and JavaScript**.
- I worked on the **backend side using php**.
- Worked With **angular on Stays module** .

Project :4 imPAC

About The Project

imPAC is the only **Cloud Security platform**. With imPAC, users can quickly generate a comprehensive inventory of their cloud assets, quickly pinpoint specific configurations, and gain insights into the distribution of assets across different accounts and regions.

imPAC provides a dynamic tracking system for monitoring cloud asset changes events, security issues, and compliance violations, allowing for timely detection of the “who, what and when” of incidents and how it impacted the compliance and security of your environment

Roles and Responsibilities

- Actively engaged in implementing customizations based on specific client requirements. This involved closely collaborating with clients to understand their needs and tailoring the solutions accordingly.
- Thoroughly analyzing the requirements for effective development initiation.
- Implementing the frontend components using technologies such as **HTML,CSS,Javascript**(modern frameworks like React,.) to create an intuitive and responsive user experience.
- Developing interactive data visualization components and charts to help the users to visualize the effects of transformations on their data.
- Written unit tests to ensure reliability.

Project :5 RightData

About The Project

RightData is a Data Product Platform that has everything you need to take raw data from any source and turn it into business-ready data.

DataFactory: DataFactory makes it easy to ingest data, transform and wrangle data, and to build robust pipelines to any output you need. And, it's all done with a drag-and-drop interface — no code required.

DataMarket : DataMarket solves the problem of getting data the last mile to the end user by providing an easy but powerful place to find, access, and take action on data products. Using a familiar “Amazon-style” interface, user can search using natural language and then see details about data products like descriptions, quality ratings, reviews, metadata, and sample data

Roles and Responsibilities

- Develop client-side logic using advanced **JavaScript frameworks using React** for efficient and dynamic user interactions.
- Integrate with **backend APIs**, ensuring seamless communication between the **front-end and back-end systems**. Collaborate with backend developers to optimize data retrieval and updates.
- Implement responsive design principles to ensure optimal performance and functionality across various devices and screen sizes.
- written unit tests to ensure reliability, stability and accuracy. performing thorough testing to catch bugs and fix issues.
- Implement state management solutions to efficiently manage and share application state across different components.

Thoroughly analyze and comprehend feature requirements for effective development initiation.

Overall Skills :

Frontend

- **JavaScript (ES6+), TypeScript**
- **React.js** (Hooks, Context, performance optimization)
- **Angular**
- **HTML5, CSS3**
- **Tailwind CSS, Bootstrap**
- **Material UI** (custom theming, internal component libraries)

Architecture & Patterns

- **Micro-Frontend (MFE) Architecture**
- Component-based architecture
- State management patterns
- Reusable design systems & UI libraries

Testing

- **Jest**
- **React Testing Library (RTL)**
- **WebdriverIO (End-to-End Automation)**
- **Unit, integration, and regression testing**

Backend / APIs

- Node.js
- Express.js
- NestJS
- REST API integration
- API error handling & async workflows

Performance & Quality

- React performance optimization
- Debugging and profiling
- Code reviews & refactoring
- Accessibility (a11y) basics

Tooling & Dev Practices

- Git, GitHub
- CI/CD pipelines
- Agile / Scrum methodology
- Jira, Confluence

Educational Background

- MCA - Post Graduated from Pondicherry central University Puducherry
- BCA- Graduated from Indira Gandhi national tribal University Amarkantak Madhya Pradesh

Key Achievements

- **First Year:** Received a *Pat on the Back* recognition for strong performance and contributions.
- **Second Year:** Awarded the *Rising Star* award for consistent growth, impact, and excellence.
